

OVERTHEMOON  WHITEPAPER

OVER THE MOON

COMMUNITY DRIVEN EXPERIMENT IN THE DEFI SPACE
DEFLATIONARY, FRICTIONLESS YIELD AND LIQUIDITY
GENERATION PROTOCOL

OVERTHEMOON TOKEN

TO THE MOON AND BEYOND

The OverTheMoon Token

OverTheMoon is a frictionless yield, auto-burning and liquidity generation smart contract that charges a 3% percent fee for each trade and immediately splits into three parts: 1% goes to investors, 1% of each tax transaction will be destined to automatically burn the supply of OverTheMoon Token, making it a deflationary token and 1% goes to the pancake liquidity pool. Hodlers don't need to do anything other than just to hold OverTheMoon Tokens in their wallets to gain rewards. This means that as more users transacts the token, the number of tokens in your wallet grows. Furthermore, the liquidity pool is constantly growing, resulting in a higher price floor OverTheMoon.

At the same time, our burn address participates as a holder in this mechanism. Every time the reward is distributed, the burn address receives a part of the fee and these tokens are removed from the total supply. This increases the scarcity of every OverTheMoon token in circulation. This means, that every time that OverTheMoon is used, the value of the remaining OverTheMoon tokens in circulations is increased by simultaneously decreasing supply. This create a fantastic positive loop, making OverTheMoon a deflationary token.

OverTheMoon Protocol:

- 1% is redistributed to all existing holders
- 1% is auto-burned
- 1% is auto-liquidity fee. Splited 50/50. Half of which is sold by the contract into BNB while the other half of the OverTheMoon Tokens are paired automatically with the previously mentioned BNB and added as a liquidity pair on Pancake Swap.

TO THE MOON AND BEYOND

Manual Burn

We have manual burns. These burns are controlled by the team and promoted based on achievements to keep the community rewarded and informed. The conditions of the manual burn and its amounts can be advertised and tracked.

OverTheMoon aims to implement a burn strategy that is beneficial and rewarding for those engaged for the long term. The total number of OverTheMoon burned will be featured in our website which allows for further transparency in identifying the current circulating supply at any time.

The Smart Contract

The smart contracts contains functions to exclude addresses from collecting rewards as well as to exclude addresses from paying taxes. This allows us to exclude addresses such as Pancake Swap from receiving rewards or paying taxes.

Tokenomics

Total Supply:

Pie Chart

The pie chart illustrates the distribution of the tokens. 95% of the tokens will be distributed within the community. 3.5% will be used for marketing, locked during the first days of the launch.

Some % will be burned within launch, and we will have a 1% remaining for the team that can be used for more manual burns.

Presale

The OverTheMoon Presale will be launched in the coming days via Pinksale.Finance, limits have been put in place to create a launch as fair as possible.

Hard Cap	∞ BNB
Soft Cap	5 BNB
Maximum allocation per wallet	- BNB
Liquidity Lock	60% for 190 Days

The Community

Our greatest strength and motivator will be our community's boundless energy and imagination, as well as our ability to help one another achieve project milestones. Person and social effectiveness, group empowerment, and community (self) organization are all values we advocate. As we continue to grow the project, we will make a concerted effort to increase trust in our society.

This will be a community token and needs the help of the community to succeed.

Road Map

Q1

- OverTheMoon mission initiated
- Website Development
- Onboard New Astronauts
- Presale Pool Opening
- Smooth Token Launch
- Huge Marketing
- Launch Party

Q2

- DeFi Explorer Listings
- CMC Fast-track.
- T1 influencers Onboard
- 2nd Marketing Wave

Q3

- CEX Listings
- Major CTs onboard
- Mainstream Marketing
- Tiktok Viral Campaign

Q4

- Gamification of the ecosystem
- Announcement of the next phase
